

The All-In-One Hull, Deck, Cabin And Spar Coating For Ultimate Protection

All boat owners struggle with gelcoat or clear coat degradation caused by UV exposure, air and water borne contaminants, blown grit, dirt and dust, solvents and corrosion. The negative effects these factors place on exposed surfaces not only make for a dull appearance but also reduce the water and dirt shedding abilities of decks, cabins, masts, booms, hatch and windshield surrounds and other areas. This, in turn, impedes drying, creates needless drag and encourages seepage. Generally small concerns but when considered on a cumulative basis over your entire vessel for a number of seasons, a potentially sizable nuisance.

Aside from top-notch appearance all boat owners need to shield their vessels from such negative influences and **SPORT POLISH** by **HOLMENKOL** is one of the easiest to apply and longest lasting protectants available specifically formulated for marine applications. Because **SPORT POLISH** is comprised of evenly sized and self-attracting ultra small nano particles the protective barrier it provides is more uniform, all-encompassing and longer lasting than competing products.

Simplify Maintenance, Enhance Appearance And Nano-Shield Your Boat:

o Cleaning And More - Remove Surface Dirt And Debris, Create A Smooth Coating And Seal Surfaces For Optimal, UV-Stable Protection

o Multi-Use - Designed Specifically For Use On Any Watercraft And Any Type Of Surface - Gelcoat, Clear Coat, Paints, Carbon And Metals

o Detergent Free - Avoid Dulling, Over Aggressive Materials And Help Protect The Environment

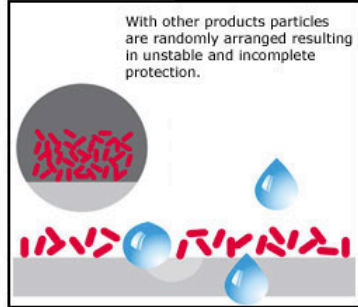

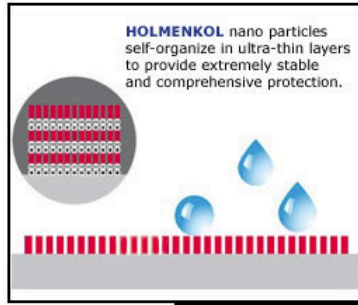

o Long-Lasting Protection - Because Nano Particles More Completely Fill And Uniformly Cover Surface Imperfections And Pitted Or Otherwise Damaged Areas, Your Boat Is Enveloped In A Nano Substructure Resulting In Optimum Weather And Environmental Shielding

o Slow Down Aging - A More Thorough Surface Coating Means That After Paints, Gelcoats And Clear Coats Are Renewed With **SPORT POLISH** They Retain Their Restored Appearance Far Longer

o Near Effortless Application - A Triple Impact Coating (Cleaner / Polish / Sealer) Is Achieved With Less Effort Due To Nano-Slipperiness Minimizing Application And Buffing Time

o Preparation Agent For Aqua Speed Bottom Treatment - **SPORT POLISH** Should Be Utilized To Prepare Hard Surfaced Boat Or Board Bottoms Prior To Applying Drag Reducing **Aqua Speed** From **HOLMENKOL** (See The **BOTTOMS & FOILS** Page Of This Website)

Badly damaged Swan 82 PARADIS undergoing major refit and **HOLMENKOL** treatment to teak decks, topsides and cabin areas.

TOP: Gouged and heavily scratched bow section.

BOTTOM: Starboard topside undergoing treatment with **SPORT POLISH**.

Nano Protection For Your Boat & Investment

1. Thoroughly shake the **SPORT POLISH** bottle.
2. Apply **SPORT POLISH** with a circular motion using **CareFleece** for manual polishing or low speed buffer for powered application.
3. Allow to dry for at least 30 minutes.
4. Once **SPORT POLISH** has dried to a hazy appearance buff off with a fresh **CareFleece** or low speed powered buffer until a brilliant surface shine is visible.
